

# IronSchool

## Attack Simulation And Phishing Awareness Training

Organizations are now targeted by an unprecedented number of phishing attacks as adversaries overwhelmingly interpret end users as the weakest link and most vulnerable to deception. While phishing awareness training is common, many businesses are not investing in advanced phishing protection education that can empower employees to identify and mitigate socially engineered attacks, such as business email compromise.

Unlike standard phishing awareness training tools, IronSchool continuously assesses individual employee behavior and skillsets through short simulated phishing scenarios. This prepares them to identify and mitigate all types of advanced email phishing threats, including those without links or attachments.

### Key Business Benefits

1.

**Reduce** phishing click rates through continuous assessment and training.

2.

**Leverage** human awareness to report suspicious emails missed by technical controls such as Secure Email Gateways (SEG).

3.

**Increase** detection rates and reduce detection times.

### How is IronSchool's Security Awareness Training Unique?

Unlike the traditional one size fits all approach to security awareness training, IronSchool starts with an initial employee assessment to benchmark individual users phishing recognition skills. Each user is then automatically graded, and based on performance levels, a training campaign comprised of short, staged, real-world phishing attacks is tailored to help improve the employees' awareness of malicious email messages.

# Multi-Level, Gamified, Interactive Micro-Learning

Simulating mock phishing attacks increases phishing awareness training and responsiveness to current and trending techniques. To aid in phishing protection, our gamified, interactive micro-learning method trains each employee individually to think and act as a security team member, becoming proactive against a multitude of attack types. All trainings are personalized and gamified to make learning about phishing quick, easy to remember and fun.

## Why IronSchool?

- Measurable phishing awareness training
- End user intelligence is fed upstream to other IRONSCALES modules
- Multi-level employee tailored campaigns
- Unique employee scoring to prioritize champion reporters

## Features

- Phishing Report Button
- On-mail real-time assistance
- Customizable templates
- Aggregated reports
- HTML 5 compatible

## Deployment

IronSchool is available as a quick and easy two-click deployment for Office365 and G Suite in the cloud, on premise, or hybrid, with no MX records changes required.
